

# AFRILANG Stdlib

## std/c/nlpphrase

**Français.** Bibliothèque AFRILANG 'std/c/nlpphrase' (niveau complex, catégorie complex). Elle expose 7 fonction(s) : phraLen, phraUpper, phraLower, phraTrim, phraSplit, phraJoin, phraReplace.

```
'import "std/c/nlpphrase"' · 'use nlpphrase'
```

```
- 'phraLen(s text) → number' - 'phraUpper(s text) → text' - 'phraLower(s text) → text' - 'phraTrim(s text) → text' - 'phraSplit(s text, delim text) → list text' - 'phraJoin(parts list text, delim text) → text' - 'phraReplace(s text, from text, to text) → text'
```

**English.** AFRILANG library 'std/c/nlpphrase' (tier complex, category complex). Exports 7 function(s): phraLen, phraUpper, phraLower, phraTrim, phraSplit, phraJoin, phraReplace.

```
'import "std/c/nlpphrase"' · 'use nlpphrase'
```

```
- 'phraLen(s text) → number' - 'phraUpper(s text) → text' - 'phraLower(s text) → text' - 'phraTrim(s text) → text' - 'phraSplit(s text, delim text) → list text' - 'phraJoin(parts list text, delim text) → text' - 'phraReplace(s text, from text, to text) → text'
```

## Contents

## Français

### 1. Vue d'ensemble

Bibliothèque AFRILANG 'std/c/nlpphrase' (niveau complex, catégorie complex). Elle expose 7 fonction(s) : phraLen, phraUpper, phraLower, phraTrim, phraSplit, phraJoin, phraReplace.

```
'import "std/c/nlpphrase"' · 'use nlpphrase'
```

```
- `phraLen(s text) → number`
- `phraUpper(s text) → text`
- `phraLower(s text) → text`
- `phraTrim(s text) → text`
- `phraSplit(s text, delim text) → list text`
- `phraJoin(parts list text, delim text) → text`
- `phraReplace(s text, from text, to text) → text`
```

### 2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/nlpphrase"
use nlpphrase
```

Niveau : complex · Catégorie : Modules complex (c/)  
Domaines avancés – graphes, NLP, réseaux complexes.

### 3. Référence API

- phraLen(s text) → number•  
phraUpper(s text) → text•  
phraLower(s text) → text•  
phraTrim(s text) → text•  
phraSplit(s text, delim text) → list•  
phraJoin(parts list text, delim text) → text•  
phraReplace(s text, from text, to text) → text

### 4. Exemples d'utilisation

```
import "std/c/nlpphrase"
use nlpphrase
```

```
create result = phraLen(/* args */)
say result
```

```
create result = phraUpper(/* args */)
say result
```

```
create result = phraLower(/* args */)
say result
```

```
create result = phraTrim(/* args */)
say result
```

```
create result = phraSplit(/* args */)
say result
```

```
create result = phraJoin(/* args */)
say result
```

## 5. Bonnes pratiques

- Préférez ``import "std/c/nlpphrase"`` en tête de fichier.
- Lancez ``afriLang check`` avant de livrer.
- Combinez avec les modules stdlib de la même catégorie.
- Voir `/stdlib/` pour le source live et les démos playground.
- Signalez les problèmes sur GitHub si une export manque.

## 6. Annexe — source

module nlpphrase

```
function phraLen(s text) returns number
end
```

```
function phraUpper(s text) returns text
end
```

```
function phraLower(s text) returns text
end
```

```
function phraTrim(s text) returns text
end
```

```
function phraSplit(s text, delim text) returns list text
end
```

```
function phraJoin(parts list text, delim text) returns text
end
```

```
function phraReplace(s text, from text, to text) returns text
end
end
```

## English

### 1. Overview

AFRILANG library 'std/c/nlpphrase' (tier complex, category complex). Exports 7 function(s): phraLen, phraUpper, phraLower, phraTrim, phraSplit, phraJoin, phraReplace.

'import "std/c/nlpphrase"' · 'use nlpphrase'

```
- `phraLen(s text) → number`  
- `phraUpper(s text) → text`  
- `phraLower(s text) → text`  
- `phraTrim(s text) → text`  
- `phraSplit(s text, delim text) → list text`  
- `phraJoin(parts list text, delim text) → text`  
- `phraReplace(s text, from text, to text) → text`
```

### 2. Installation & import

Add the module to your program:

```
import "std/c/nlpphrase"  
use nlpphrase
```

Tier: complex · Category: Complex modules (c/)  
Advanced domains – graphs, NLP, complex networks.

### 3. API reference

- phraLen(s text) → number•  
phraUpper(s text) → text•  
phraLower(s text) → text•  
phraTrim(s text) → text•  
phraSplit(s text, delim text) → list•  
phraJoin(parts list text, delim text) → text•  
phraReplace(s text, from text, to text) → text

### 4. Usage examples

```
import "std/c/nlpphrase"  
use nlpphrase
```

```
create result = phraLen(/* args */)   
say result
```

```
create result = phraUpper(/* args */)   
say result
```

```
create result = phraLower(/* args */)   
say result
```

```
create result = phraTrim(/* args */)   
say result
```

```
create result = phraSplit(/* args */)   
say result
```

```
create result = phraJoin(/* args */)
say result
```

## 5. Best practices

- Prefer ``import "std/c/nlpphrase"`` at the top of your file.
- Run ``afrilang check`` before shipping.
- Combine with related stdlib modules from the same category.
- See `/stdlib/` for the live source and playground demos.
- Report issues on GitHub if an export is missing or undocumented.

## 6. Appendix — source

module nlpphrase

```
function phraLen(s text) returns number
end
```

```
function phraUpper(s text) returns text
end
```

```
function phraLower(s text) returns text
end
```

```
function phraTrim(s text) returns text
end
```

```
function phraSplit(s text, delim text) returns list text
end
```

```
function phraJoin(parts list text, delim text) returns text
end
```

```
function phraReplace(s text, from text, to text) returns text
end
end
```

## Référence rapide / Quick reference

- Import : `import "std/c/nlpphrase"`
- Vérification : `afrilang check`
- Documentation : <https://afrilang.dev/stdlib/std/c/nlpphrase/>

## Source (extrait)

```
module nlpphrase

function phraLen(s text) returns number
end

function phraUpper(s text) returns text
```

```
end

function phraLower(s text) returns text
end

function phraTrim(s text) returns text
end

function phraSplit(s text, delim text) returns list text
end

function phraJoin(parts list text, delim text) returns text
end

function phraReplace(s text, from text, to text) returns text
end
end
```
