

AFRILANG Stdlib

std/c/nlpstem

Français. Bibliothèque AFRILANG 'std/c/nlpstem' (niveau complex, catégorie complex). Elle expose 7 fonction(s) : stemLen, stemUpper, stemLower, stemTrim, stemSplit, stemJoin, stemReplace.

```
'import "std/c/nlpstem"' · 'use nlpstem'
```

```
- 'stemLen(s text) → number' - 'stemUpper(s text) → text' - 'stemLower(s text) → text' - 'stemTrim(s text) → text' - 'stemSplit(s text, delim text) → list text' - 'stemJoin(parts list text, delim text) → text' - 'stemReplace(s text, from text, to text) → text'
```

English. AFRILANG library 'std/c/nlpstem' (tier complex, category complex). Exports 7 function(s): stemLen, stemUpper, stemLower, stemTrim, stemSplit, stemJoin, stemReplace.

```
'import "std/c/nlpstem"' · 'use nlpstem'
```

```
- 'stemLen(s text) → number' - 'stemUpper(s text) → text' - 'stemLower(s text) → text' - 'stemTrim(s text) → text' - 'stemSplit(s text, delim text) → list text' - 'stemJoin(parts list text, delim text) → text' - 'stemReplace(s text, from text, to text) → text'
```

Français

1. Vue d'ensemble

Bibliothèque AFRILANG 'std/c/nlpstem' (niveau complexe, catégorie complexe). Elle expose 7 fonction(s) : stemLen, stemUpper, stemLower, stemTrim, stemSplit, stemJoin, stemReplace.

```
'import "std/c/nlpstem"' · 'use nlpstem'
```

```
- `stemLen(s text) → number`
- `stemUpper(s text) → text`
- `stemLower(s text) → text`
- `stemTrim(s text) → text`
- `stemSplit(s text, delim text) → list text`
- `stemJoin(parts list text, delim text) → text`
- `stemReplace(s text, from text, to text) → text`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/nlpstem"
use nlpstem
```

Niveau : complexe · Catégorie : Modules complexe (c/)
Domaines avancés – graphes, NLP, réseaux complexes.

3. Référence API

- stemLen(s text) → number•
- stemUpper(s text) → text•
- stemLower(s text) → text•
- stemTrim(s text) → text•
- stemSplit(s text, delim text) → list•
- stemJoin(parts list text, delim text) → text•
- stemReplace(s text, from text, to text) → text

4. Exemples d'utilisation

```
import "std/c/nlpstem"
use nlpstem
```

```
create result = stemLen(/* args */)
say result
```

```
create result = stemUpper(/* args */)
say result
```

```
create result = stemLower(/* args */)
say result
```

```
create result = stemTrim(/* args */)
say result
```

```
create result = stemSplit(/* args */)
say result
```

```
create result = stemJoin(/* args */)
say result
```

5. Bonnes pratiques

- Préférez ``import "std/c/nlpstem"`` en tête de fichier.
- Lancez ``afriLang check`` avant de livrer.
- Combinez avec les modules stdlib de la même catégorie.
- Voir `/stdlib/` pour le source live et les démos playground.
- Signalez les problèmes sur GitHub si une export manque.

6. Annexe — source

module nlpstem

```
function stemLen(s text) returns number
end
```

```
function stemUpper(s text) returns text
end
```

```
function stemLower(s text) returns text
end
```

```
function stemTrim(s text) returns text
end
```

```
function stemSplit(s text, delim text) returns list text
end
```

```
function stemJoin(parts list text, delim text) returns text
end
```

```
function stemReplace(s text, from text, to text) returns text
end
end
```

English

1. Overview

AFRILANG library 'std/c/nlpstem' (tier complex, category complex). Exports 7 function(s): stemLen, stemUpper, stemLower, stemTrim, stemSplit, stemJoin, stemReplace.

```
'import "std/c/nlpstem"' · 'use nlpstem'
```

```
- `stemLen(s text) → number`
- `stemUpper(s text) → text`
- `stemLower(s text) → text`
- `stemTrim(s text) → text`
- `stemSplit(s text, delim text) → list text`
- `stemJoin(parts list text, delim text) → text`
- `stemReplace(s text, from text, to text) → text`
```

2. Installation & import

Add the module to your program:

```
import "std/c/nlpstem"
use nlpstem
```

Tier: complex · Category: Complex modules (c/)
Advanced domains – graphs, NLP, complex networks.

3. API reference

- stemLen(s text) → number•
stemUpper(s text) → text•
stemLower(s text) → text•
stemTrim(s text) → text•
stemSplit(s text, delim text) → list•
stemJoin(parts list text, delim text) → text•
stemReplace(s text, from text, to text) → text

4. Usage examples

```
import "std/c/nlpstem"
use nlpstem
```

```
create result = stemLen(/* args */)
say result
```

```
create result = stemUpper(/* args */)
say result
```

```
create result = stemLower(/* args */)
say result
```

```
create result = stemTrim(/* args */)
say result
```

```
create result = stemSplit(/* args */)
say result
```

```
create result = stemJoin(/* args */)
say result
```

5. Best practices

- Prefer ``import "std/c/nlpstem"`` at the top of your file.
- Run ``afriLang check`` before shipping.
- Combine with related stdlib modules from the same category.
- See `/stdlib/` for the live source and playground demos.
- Report issues on GitHub if an export is missing or undocumented.

6. Appendix — source

module nlpstem

```
function stemLen(s text) returns number
end
```

```
function stemUpper(s text) returns text
end
```

```
function stemLower(s text) returns text
end
```

```
function stemTrim(s text) returns text
end
```

```
function stemSplit(s text, delim text) returns list text
end
```

```
function stemJoin(parts list text, delim text) returns text
end
```

```
function stemReplace(s text, from text, to text) returns text
end
end
```

Référence rapide / Quick reference

- Import : `import "std/c/nlpstem"`
- Vérification : `afriLang check`
- Documentation : <https://afriLang.dev/stdlib/std/c/nlpstem/>

Source (excerpt)

```
module nlpstem

function stemLen(s text) returns number
end

function stemUpper(s text) returns text
end

function stemLower(s text) returns text
end

function stemTrim(s text) returns text
end

function stemSplit(s text, delim text) returns list text
end

function stemJoin(parts list text, delim text) returns text
end

function stemReplace(s text, from text, to text) returns text
end
end
```
