

AFRILANG Stdlib

std/c/sigfilter

Français. Bibliothèque AFRILANG 'std/c/sigfilter' (niveau complex, catégorie complex). Elle expose 6 fonction(s) : lowPass, highPass, medianFilter, savgol, bandpass, snr.

```
'import "std/c/sigfilter"' · 'use sigfilter'
```

```
- 'lowPass(v list number, alpha number) → list number' - 'highPass(v list number, alpha number) → list number' - 'medianFilter(v list number, win number) → list number' - 'savgol(v list number, win number) → list number' - 'bandpass(v list number, lo number, hi number) → list number' - 'snr(signal list number, noise list number) → number'
```

English. AFRILANG library 'std/c/sigfilter' (tier complex, category complex). Exports 6 function(s): lowPass, highPass, medianFilter, savgol, bandpass, snr.

```
'import "std/c/sigfilter"' · 'use sigfilter'
```

```
- 'lowPass(v list number, alpha number) → list number' - 'highPass(v list number, alpha number) → list number' - 'medianFilter(v list number, win number) → list number' - 'savgol(v list number, win number) → list number' - 'bandpass(v list number, lo number, hi number) → list number' - 'snr(signal list number, noise list number) → number'
```

Français

1. Vue d'ensemble

Bibliothèque AFRILANG 'std/c/sigfilter' (niveau complexe, catégorie complexe). Elle expose 6 fonction(s) : lowPass, highPass, medianFilter, savgol, bandpass, snr.

'import "std/c/sigfilter"' · 'use sigfilter'

```
- `lowPass(v list number, alpha number) → list number`
- `highPass(v list number, alpha number) → list number`
- `medianFilter(v list number, win number) → list number`
- `savgol(v list number, win number) → list number`
- `bandpass(v list number, lo number, hi number) → list number`
- `snr(signal list number, noise list number) → number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/sigfilter"
use sigfilter
```

Niveau : complexe · Catégorie : Modules complexe (c/)
Domaines avancés – graphes, NLP, réseaux complexes.

3. Référence API

- lowPass(v list number, alpha number) → list
- highPass(v list number, alpha number) → list
- medianFilter(v list number, win number) → list
- savgol(v list number, win number) → list
- bandpass(v list number, lo number, hi number) → list
- snr(signal list number, noise list number) → number

4. Exemples d'utilisation

```
import "std/c/sigfilter"
use sigfilter
```

```
create result = lowPass(/* args */)
say result
```

```
create result = highPass(/* args */)
say result
```

```
create result = medianFilter(/* args */)
say result
```

```
create result = savgol(/* args */)
say result
```

```
create result = bandpass(/* args */)
say result
```

```
create result = snr(/* args */)
say result
```

5. Bonnes pratiques

- Préférez ``import "std/c/sigfilter"`` en tête de fichier.
- Lancez ``afriLang check`` avant de livrer.
- Combinez avec les modules `stdlib` de la même catégorie.
- Voir `/stdlib/` pour le source live et les démos playground.
- Signalez les problèmes sur GitHub si une export manque.

6. Annexe — source

module sigfilter

```
function lowPass(v list number, alpha number) returns list number  
end
```

```
function highPass(v list number, alpha number) returns list number  
end
```

```
function medianFilter(v list number, win number) returns list number  
end
```

```
function savgol(v list number, win number) returns list number  
end
```

```
function bandpass(v list number, lo number, hi number) returns list number  
end
```

```
function snr(signal list number, noise list number) returns number  
end  
end
```

English

1. Overview

AFRILANG library 'std/c/sigfilter' (tier complex, category complex). Exports 6 function(s): lowPass, highPass, medianFilter, savgol, bandpass, snr.

'import "std/c/sigfilter"' · 'use sigfilter'

```
- `lowPass(v list number, alpha number) → list number`
- `highPass(v list number, alpha number) → list number`
- `medianFilter(v list number, win number) → list number`
- `savgol(v list number, win number) → list number`
- `bandpass(v list number, lo number, hi number) → list number`
- `snr(signal list number, noise list number) → number`
```

2. Installation & import

Add the module to your program:

```
import "std/c/sigfilter"
use sigfilter
```

Tier: complex · Category: Complex modules (c/)
Advanced domains – graphs, NLP, complex networks.

3. API reference

- lowPass(v list number, alpha number) → list
- highPass(v list number, alpha number) → list
- medianFilter(v list number, win number) → list
- savgol(v list number, win number) → list
- bandpass(v list number, lo number, hi number) → list
- snr(signal list number, noise list number) → number

4. Usage examples

```
import "std/c/sigfilter"
use sigfilter
```

```
create result = lowPass(/* args */)
say result
```

```
create result = highPass(/* args */)
say result
```

```
create result = medianFilter(/* args */)
say result
```

```
create result = savgol(/* args */)
say result
```

```
create result = bandpass(/* args */)
say result
```

```
create result = snr(/* args */)
say result
```

5. Best practices

- Prefer ``import "std/c/sigfilter"`` at the top of your file.
- Run ``afrilang check`` before shipping.
- Combine with related stdlib modules from the same category.
- See `/stdlib/` for the live source and playground demos.
- Report issues on GitHub if an export is missing or undocumented.

6. Appendix — source

module sigfilter

```
function lowPass(v list number, alpha number) returns list number
end
```

```
function highPass(v list number, alpha number) returns list number
end
```

```
function medianFilter(v list number, win number) returns list number
end
```

```
function savgol(v list number, win number) returns list number
end
```

```
function bandpass(v list number, lo number, hi number) returns list number
end
```

```
function snr(signal list number, noise list number) returns number
end
end
```

Référence rapide / Quick reference

- Import : `import "std/c/sigfilter"`
- Vérification : `afrilang check`
- Documentation : <https://afrilang.dev/stdlib/std/c/sigfilter/>

Source (extrait)

```
module sigfilter

function lowPass(v list number, alpha number) returns list number
end

function highPass(v list number, alpha number) returns list number
end

function medianFilter(v list number, win number) returns list number
end

function savgol(v list number, win number) returns list number
end

function bandpass(v list number, lo number, hi number) returns list number
```

```
end
```

```
function snr(signal list number, noise list number) returns number
```

```
end
```

```
end
```
