

AFRILANG Stdlib

std/c/sigresample

Français. Bibliothèque AFRILANG 'std/c/sigresample' (niveau complexe, catégorie complex). Elle expose 7 fonction(s) : resaSum, resaMean, resaMin, resaMax, resaVar, resaStd, resaNorm.

'import "std/c/sigresample"' · 'use sigresample'

- 'resaSum(v list number) → number' - 'resaMean(v list number) → number' - 'resaMin(v list number) → number' - 'resaMax(v list number) → number' - 'resaVar(v list number) → number' - 'resaStd(v list number) → number' - 'resaNorm(v list number) → list number' **En-**

glish. AFRILANG library 'std/c/sigresample' (tier complex, category complex). Exports 7 function(s): resaSum, resaMean, resaMin, resaMax, resaVar, resaStd, resaNorm.

'import "std/c/sigresample"' · 'use sigresample'

- 'resaSum(v list number) → number' - 'resaMean(v list number) → number' - 'resaMin(v list number) → number' - 'resaMax(v list number) → number' - 'resaVar(v list number) → number' - 'resaStd(v list number) → number' - 'resaNorm(v list number) → list number'

Contents

Français

1. Vue d'ensemble

Bibliothèque AFRILANG 'std/c/sigresample' (niveau complex, catégorie complex). Elle expose 7 fonction(s) : resaSum, resaMean, resaMin, resaMax, resaVar, resaStd, resaNorm.

```
'import "std/c/sigresample"' · 'use sigresample'
```

```
- `resaSum(v list number) → number`
- `resaMean(v list number) → number`
- `resaMin(v list number) → number`
- `resaMax(v list number) → number`
- `resaVar(v list number) → number`
- `resaStd(v list number) → number`
- `resaNorm(v list number) → list number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/sigresample"
use sigresample
```

Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés – graphes, NLP, réseaux complexes.

3. Référence API

- resaSum(v list number) → number•
resaMean(v list number) → number•
resaMin(v list number) → number•
resaMax(v list number) → number•
resaVar(v list number) → number•
resaStd(v list number) → number•
resaNorm(v list number) → list

4. Exemples d'utilisation

```
import "std/c/sigresample"
use sigresample
```

```
create result = resaSum(/* args */)
say result
```

```
create result = resaMean(/* args */)
say result
```

```
create result = resaMin(/* args */)
say result
```

```
create result = resaMax(/* args */)
say result
```

```
create result = resaVar(/* args */)
say result
```

```
create result = resaStd(/* args */)
say result
```

5. Bonnes pratiques

- Préférez ``import "std/c/sigresample"`` en tête de fichier.
- Lancez ``afriLang check`` avant de livrer.
- Combinez avec les modules stdlib de la même catégorie.
- Voir `/stdlib/` pour le source live et les démos playground.
- Signalez les problèmes sur GitHub si une export manque.

6. Annexe — source

module sigresample

```
function resaSum(v list number) returns number
end
```

```
function resaMean(v list number) returns number
end
```

```
function resaMin(v list number) returns number
end
```

```
function resaMax(v list number) returns number
end
```

```
function resaVar(v list number) returns number
end
```

```
function resaStd(v list number) returns number
end
```

```
function resaNorm(v list number) returns list number
end
end
```

English

1. Overview

AFRILANG library 'std/c/sigresample' (tier complex, category complex). Exports 7 function(s): resaSum, resaMean, resaMin, resaMax, resaVar, resaStd, resaNorm.

'import "std/c/sigresample"' · 'use sigresample'

```
- `resaSum(v list number) → number`  
- `resaMean(v list number) → number`  
- `resaMin(v list number) → number`  
- `resaMax(v list number) → number`  
- `resaVar(v list number) → number`  
- `resaStd(v list number) → number`  
- `resaNorm(v list number) → list number`
```

2. Installation & import

Add the module to your program:

```
import "std/c/sigresample"  
use sigresample
```

Tier: complex · Category: Complex modules (c/)
Advanced domains – graphs, NLP, complex networks.

3. API reference

- resaSum(v list number) → number•
resaMean(v list number) → number•
resaMin(v list number) → number•
resaMax(v list number) → number•
resaVar(v list number) → number•
resaStd(v list number) → number•
resaNorm(v list number) → list

4. Usage examples

```
import "std/c/sigresample"  
use sigresample
```

```
create result = resaSum(/* args */)   
say result
```

```
create result = resaMean(/* args */)   
say result
```

```
create result = resaMin(/* args */)   
say result
```

```
create result = resaMax(/* args */)   
say result
```

```
create result = resaVar(/* args */)   
say result
```

```
create result = resaStd(/* args */)
say result
```

5. Best practices

- Prefer ``import "std/c/sigresample"`` at the top of your file.
- Run ``afrilang check`` before shipping.
- Combine with related stdlib modules from the same category.
- See `/stdlib/` for the live source and playground demos.
- Report issues on GitHub if an export is missing or undocumented.

6. Appendix — source

module sigresample

```
function resaSum(v list number) returns number
end
```

```
function resaMean(v list number) returns number
end
```

```
function resaMin(v list number) returns number
end
```

```
function resaMax(v list number) returns number
end
```

```
function resaVar(v list number) returns number
end
```

```
function resaStd(v list number) returns number
end
```

```
function resaNorm(v list number) returns list number
end
end
```

Référence rapide / Quick reference

- Import : `import "std/c/sigresample"`
- Vérification : `afrilang check`
- Documentation : <https://afrilang.dev/stdlib/std/c/sigresample/>

Source (extrait)

```
module sigresample

function resaSum(v list number) returns number
end

function resaMean(v list number) returns number
```

```
end

function resaMin(v list number) returns number
end

function resaMax(v list number) returns number
end

function resaVar(v list number) returns number
end

function resaStd(v list number) returns number
end

function resaNorm(v list number) returns list number
end
end
```
