## Contents

## Français

### 1. Vue d'ensemble

Bibliothèque AFRILANG 'std/c/simdiscrete' (niveau complexe, catégorie complex). Elle expose 8 fonction(s) : discSum, discMean, discMin, discMax, discVar, discStd, discNorm, simulate.

```
'import "std/c/simdiscrete"' · 'use simdiscrete'
```

```
- `discSum(v list number) → number`
- `discMean(v list number) → number`
- `discMin(v list number) → number`
- `discMax(v list number) → number`
- `discVar(v list number) → number`
- `discStd(v list number) → number`
- `discNorm(v list number) → list number`
- `simulate(steps number, seed number) → list number`
```

### 2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/simdiscrete"
use simdiscrete
```

Niveau : complex · Catégorie : Modules complex (c/)  
Domaines avancés – graphes, NLP, réseaux complexes.

### 3. Référence API

- discSum(v list number) → number•  
discMean(v list number) → number•  
discMin(v list number) → number•  
discMax(v list number) → number•  
discVar(v list number) → number•  
discStd(v list number) → number•  
discNorm(v list number) → list•  
simulate(steps number, seed number) → list

### 4. Exemples d'utilisation

```
import "std/c/simdiscrete"
use simdiscrete
```

```
create result = discSum(/* args */)
say result
```

```
create result = discMean(/* args */)
say result
```

```
create result = discMin(/* args */)
say result
```

```
create result = discMax(/* args */)
say result
```

```
create result = discVar(/* args */)
say result
```

```
create result = discStd(/* args */)
say result
```

## 5. Bonnes pratiques

- Préférez ``import "std/c/simdiscrete"`` en tête de fichier.
- Lancez ``afrilang check`` avant de livrer.
- Combinez avec les modules stdlib de la même catégorie.
- Voir `/stdlib/` pour le source live et les démos playground.
- Signalez les problèmes sur GitHub si une export manque.

## 6. Annexe — source

module simdiscrete

```
function discSum(v list number) returns number
end
```

```
function discMean(v list number) returns number
end
```

```
function discMin(v list number) returns number
end
```

```
function discMax(v list number) returns number
end
```

```
function discVar(v list number) returns number
end
```

```
function discStd(v list number) returns number
end
```

```
function discNorm(v list number) returns list number
end
```

```
function simulate(steps number, seed number) returns list number
end
end
```

## English

### 1. Overview

AFRILANG library 'std/c/simdiscrete' (tier complex, category complex). Exports 8 function(s): discSum, discMean, discMin, discMax, discVar, discStd, discNorm, simulate.

```
'import "std/c/simdiscrete"' · 'use simdiscrete'
```

```
- `discSum(v list number) → number`
- `discMean(v list number) → number`
- `discMin(v list number) → number`
- `discMax(v list number) → number`
- `discVar(v list number) → number`
- `discStd(v list number) → number`
- `discNorm(v list number) → list number`
- `simulate(steps number, seed number) → list number`
```

### 2. Installation & import

Add the module to your program:

```
import "std/c/simdiscrete"
use simdiscrete
```

Tier: complex · Category: Complex modules (c/)  
Advanced domains – graphs, NLP, complex networks.

### 3. API reference

- discSum(v list number) → number•  
discMean(v list number) → number•  
discMin(v list number) → number•  
discMax(v list number) → number•  
discVar(v list number) → number•  
discStd(v list number) → number•  
discNorm(v list number) → list•  
simulate(steps number, seed number) → list

### 4. Usage examples

```
import "std/c/simdiscrete"
use simdiscrete
```

```
create result = discSum(/* args */)
say result
```

```
create result = discMean(/* args */)
say result
```

```
create result = discMin(/* args */)
say result
```

```
create result = discMax(/* args */)
say result
```

```
create result = discVar(/* args */)
say result
```

```
create result = discStd(/* args */)
say result
```

## 5. Best practices

- Prefer ``import "std/c/simdiscrete"`` at the top of your file.
- Run ``afrilang check`` before shipping.
- Combine with related stdlib modules from the same category.
- See `/stdlib/` for the live source and playground demos.
- Report issues on GitHub if an export is missing or undocumented.

## 6. Appendix — source

module simdiscrete

```
function discSum(v list number) returns number
end
```

```
function discMean(v list number) returns number
end
```

```
function discMin(v list number) returns number
end
```

```
function discMax(v list number) returns number
end
```

```
function discVar(v list number) returns number
end
```

```
function discStd(v list number) returns number
end
```

```
function discNorm(v list number) returns list number
end
```

```
function simulate(steps number, seed number) returns list number
end
end
```

## Référence rapide / Quick reference

- Import : `import "std/c/simdiscrete"`
- Vérification : `afrilang check`
- Documentation : <https://afrilang.dev/stdlib/std/c/simdiscrete/>

## Source (extrait)

```
module simdiscrete

function discSum(v list number) returns number
end

function discMean(v list number) returns number
end

function discMin(v list number) returns number
end

function discMax(v list number) returns number
end

function discVar(v list number) returns number
end

function discStd(v list number) returns number
end

function discNorm(v list number) returns list number
end

function simulate(steps number, seed number) returns list number
end
end
```
