

AFRILANG Stdlib

std/c/simpoisson

Français. Bibliothèque AFRILANG 'std/c/simpoisson' (niveau complex, catégorie complex). Elle expose 8 fonction(s) : poisSum, poisMean, poisMin, poisMax, poisVar, poisStd, poisNorm, simulate.

```
'import "std/c/simpoisson"' · 'use simpoisson'
```

```
- 'poisSum(v list number) → number' - 'poisMean(v list number) → number' - 'poisMin(v list number) → number' - 'poisMax(v list number) → number' - 'poisVar(v list number) → number' - 'poisStd(v list number) → number' - 'poisNorm(v list number) → list number' - 'simulate(steps number, seed number) → list number'
```

English. AFRILANG library 'std/c/simpoisson' (tier complex, category complex). Exports 8 function(s): poisSum, poisMean, poisMin, poisMax, poisVar, poisStd, poisNorm, simulate.

```
'import "std/c/simpoisson"' · 'use simpoisson'
```

```
- 'poisSum(v list number) → number' - 'poisMean(v list number) → number' - 'poisMin(v list number) → number' - 'poisMax(v list number) → number' - 'poisVar(v list number) → number' - 'poisStd(v list number) → number' - 'poisNorm(v list number) → list number' - 'simulate(steps number, seed number) → list number'
```

1. Vue d'ensemble

Bibliothèque AFRILANG 'std/c/simpoisson' (niveau complex, catégorie complex). Elle expose 8 fonction(s) : poisSum, poisMean, poisMin, poisMax, poisVar, poisStd, poisNorm, simulate.

```
'import "std/c/simpoisson"' · 'use simpoisson'
```

```
- `poisSum(v list number) → number`
- `poisMean(v list number) → number`
- `poisMin(v list number) → number`
- `poisMax(v list number) → number`
- `poisVar(v list number) → number`
- `poisStd(v list number) → number`
- `poisNorm(v list number) → list number`
- `simulate(steps number, seed number) → list number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/simpoisson"
use simpoisson
```

Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés – graphes, NLP, réseaux complexes.

3. Référence API

- poisSum(v list number) → number•
poisMean(v list number) → number•
poisMin(v list number) → number•
poisMax(v list number) → number•
poisVar(v list number) → number•
poisStd(v list number) → number•
poisNorm(v list number) → list•
simulate(steps number, seed number) → list

4. Exemples d'utilisation

```
import "std/c/simpoisson"
use simpoisson
```

```
create result = poisSum(/* args */)
say result
```

```
create result = poisMean(/* args */)
say result
```

```
create result = poisMin(/* args */)
say result
```

```
create result = poisMax(/* args */)
say result
```

```
create result = poisVar(/* args */)
say result
```

```
create result = poisStd(/* args */)
say result
```

5. Bonnes pratiques

- Préférez ``import "std/c/simpoisson"`` en tête de fichier.
- Lancez ``afriLang check`` avant de livrer.
- Combinez avec les modules stdlib de la même catégorie.
- Voir `/stdlib/` pour le source live et les démos playground.
- Signalez les problèmes sur GitHub si une export manque.

6. Annexe — source

module simpoisson

```
function poisSum(v list number) returns number
end
```

```
function poisMean(v list number) returns number
end
```

```
function poisMin(v list number) returns number
end
```

```
function poisMax(v list number) returns number
end
```

```
function poisVar(v list number) returns number
end
```

```
function poisStd(v list number) returns number
end
```

```
function poisNorm(v list number) returns list number
end
```

```
function simulate(steps number, seed number) returns list number
end
end
```

English

1. Overview

AFRILANG library 'std/c/simpoisson' (tier complex, category complex). Exports 8 function(s): poisSum, poisMean, poisMin, poisMax, poisVar, poisStd, poisNorm, simulate.

```
'import "std/c/simpoisson"' · 'use simpoisson'
```

```
- `poisSum(v list number) → number`
- `poisMean(v list number) → number`
- `poisMin(v list number) → number`
- `poisMax(v list number) → number`
- `poisVar(v list number) → number`
- `poisStd(v list number) → number`
- `poisNorm(v list number) → list number`
- `simulate(steps number, seed number) → list number`
```

2. Installation & import

Add the module to your program:

```
import "std/c/simpoisson"
use simpoisson
```

Tier: complex · Category: Complex modules (c/)
Advanced domains – graphs, NLP, complex networks.

3. API reference

- - poisSum(v list number) → number•
 - poisMean(v list number) → number•
 - poisMin(v list number) → number•
 - poisMax(v list number) → number•
 - poisVar(v list number) → number•
 - poisStd(v list number) → number•
 - poisNorm(v list number) → list•
 - simulate(steps number, seed number) → list

4. Usage examples

```
import "std/c/simpoisson"
use simpoisson
```

```
create result = poisSum(/* args */)
say result
```

```
create result = poisMean(/* args */)
say result
```

```
create result = poisMin(/* args */)
say result
```

```
create result = poisMax(/* args */)
say result
```

```
create result = poisVar(/* args */)
say result
```

```
create result = poisStd(/* args */)
say result
```

5. Best practices

- Prefer ``import "std/c/simpoisson"`` at the top of your file.
- Run ``afrilang check`` before shipping.
- Combine with related stdlib modules from the same category.
- See `/stdlib/` for the live source and playground demos.
- Report issues on GitHub if an export is missing or undocumented.

6. Appendix — source

module simpoisson

```
function poisSum(v list number) returns number
end
```

```
function poisMean(v list number) returns number
end
```

```
function poisMin(v list number) returns number
end
```

```
function poisMax(v list number) returns number
end
```

```
function poisVar(v list number) returns number
end
```

```
function poisStd(v list number) returns number
end
```

```
function poisNorm(v list number) returns list number
end
```

```
function simulate(steps number, seed number) returns list number
end
end
```

Référence rapide / Quick reference

- Import : `import "std/c/simpoisson"`
- Vérification : `afrilang check`
- Documentation : <https://afrilang.dev/stdlib/std/c/simpoisson/>

Source (extrait)

```
module simpoisson

function poisSum(v list number) returns number
end

function poisMean(v list number) returns number
end

function poisMin(v list number) returns number
end
