

AFRILANG Stdlib

std/c/statanova

Français. Bibliothèque AFRILANG 'std/c/statanova' (niveau complexe, catégorie complexe). Elle expose 6 fonction(s) : groupMeans, grandMean, betweenSS, withinSS, fStatistic, etaSquared.

```
'import "std/c/statanova"' · 'use statanova'
```

```
- 'groupMeans(groups list number, labels list number) → list number'
```

```
- 'grandMean(v list number) → number' - 'betweenSS(groups list num-
```

```
ber, labels list number) → number' - 'withinSS(groups list number, la-
```

```
bel list number) → number' - 'fStatistic(groups list number, labels list
```

```
number) → number' - 'etaSquared(groups list number, labels list num-
```

```
ber) → number'
```

English. AFRILANG library 'std/c/statanova' (tier complex, category complex). Exports 6 function(s): groupMeans, grandMean, betweenSS, withinSS, fStatistic, etaSquared.

```
'import "std/c/statanova"' · 'use statanova'
```

```
- 'groupMeans(groups list number, labels list number) → list number'
```

```
- 'grandMean(v list number) → number' - 'betweenSS(groups list num-
```

```

1. Vue d'ensemble

Bibliothèque AFRILANG 'std/c/statanova' (niveau complexe, catégorie complexe). Elle expose 6 fonction(s) : groupMeans, grandMean, betweenSS, withinSS, fStatistic, etaSquared.

```
'import "std/c/statanova"' · 'use statanova'
```

```
- `groupMeans(groups list number, labels list number) → list`
- `grandMean(v list number) → number`
- `betweenSS(groups list number, labels list number) → number`
- `withinSS(groups list number, labels list number) → number`
- `fStatistic(groups list number, labels list number) → number`
- `etaSquared(groups list number, labels list number) → number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/statanova"
use statanova
```

Niveau : complexe · Catégorie : Modules complexe (c/)
Domaines avancés – graphes, NLP, réseaux complexes.

3. Référence API

- groupMeans(groups list number, labels list number) → list
- grandMean(v list number) → number
- betweenSS(groups list number, labels list number) → number
- withinSS(groups list number, labels list number) → number
- fStatistic(groups list number, labels list number) → number
- etaSquared(groups list number, labels list number) → number

4. Exemples d'utilisation

```
import "std/c/statanova"
use statanova
```

```
create result = groupMeans(/* args */)
say result
```

```
create result = grandMean(/* args */)
say result
```

```
create result = betweenSS(/* args */)
say result
```

```
create result = withinSS(/* args */)
say result
```

```
create result = fStatistic(/* args */)
say result
```

```
create result = etaSquared(/* args */)
say result
```

5. Bonnes pratiques

- Préférez ``import "std/c/statanova"`` en tête de fichier.
- Lancez ``afirang check`` avant de livrer.
- Combinez avec les modules stdlib de la même catégorie.
- Voir `/stdlib/` pour le source live et les démos playground.
- Signalez les problèmes sur GitHub si une export manque.

6. Annexe — source

module statanova

```
function groupMeans(groups list number, labels list number) returns list number  
end
```

```
function grandMean(v list number) returns number  
end
```

```
function betweenSS(groups list number, labels list number) returns number  
end
```

```
function withinSS(groups list number, labels list number) returns number  
end
```

```
function fStatistic(groups list number, labels list number) returns number  
end
```

```
function etaSquared(groups list number, labels list number) returns number  
end  
end
```

English

1. Overview

AFRILANG library 'std/c/statanova' (tier complex, category complex). Exports 6 function(s): groupMeans, grandMean, betweenSS, withinSS, fStatistic, etaSquared.

'import "std/c/statanova"' · 'use statanova'

```
- `groupMeans(groups list number, labels list number) → list number`
- `grandMean(v list number) → number`
- `betweenSS(groups list number, labels list number) → number`
- `withinSS(groups list number, labels list number) → number`
- `fStatistic(groups list number, labels list number) → number`
- `etaSquared(groups list number, labels list number) → number`
```

2. Installation & import

Add the module to your program:

```
import "std/c/statanova"
use statanova
```

Tier: complex · Category: Complex modules (c/)
Advanced domains – graphs, NLP, complex networks.

3. API reference

- groupMeans(groups list number, labels list number) → list
- grandMean(v list number) → number
- betweenSS(groups list number, labels list number) → number
- withinSS(groups list number, labels list number) → number
- fStatistic(groups list number, labels list number) → number
- etaSquared(groups list number, labels list number) → number

4. Usage examples

```
import "std/c/statanova"
use statanova
```

```
create result = groupMeans(/* args */)
say result
```

```
create result = grandMean(/* args */)
say result
```

```
create result = betweenSS(/* args */)
say result
```

```
create result = withinSS(/* args */)
say result
```

```
create result = fStatistic(/* args */)
say result
```

```
create result = etaSquared(/* args */)
say result
```

5. Best practices

- Prefer ``import "std/c/statanova"`` at the top of your file.
- Run ``afrilang check`` before shipping.
- Combine with related stdlib modules from the same category.
- See `/stdlib/` for the live source and playground demos.
- Report issues on GitHub if an export is missing or undocumented.

6. Appendix — source

module statanova

```
function groupMeans(groups list number, labels list number) returns list number
end
```

```
function grandMean(v list number) returns number
end
```

```
function betweenSS(groups list number, labels list number) returns number
end
```

```
function withinSS(groups list number, labels list number) returns number
end
```

```
function fStatistic(groups list number, labels list number) returns number
end
```

```
function etaSquared(groups list number, labels list number) returns number
end
end
```

Référence rapide / Quick reference

- Import : `import "std/c/statanova"`
- Vérification : `afrilang check`
- Documentation : <https://afrilang.dev/stdlib/std/c/statanova/>
