

AFRILANG Stdlib

std/c/statnormcdf

Français. Bibliothèque AFRILANG 'std/c/statnormcdf' (niveau complexe, catégorie complexe). Elle expose 6 fonction(s) : normPdf, normCdfApprox, zFromP, standardize, logLikelihood, bivariatePdf.

```
'import "std/c/statnormcdf"' · 'use statnormcdf'
- 'normPdf(x number, mu number, sigma number) → number' - 'normCdfApprox(x number, mu number, sigma number) → number' - 'zFromP(p number) → number' - 'standardize(x number, mu number, sigma number) → number' - 'logLikelihood(data list number, mu number, sigma number) → number' - 'bivariatePdf(x number, y number, rho number) → number'
```

English. AFRILANG library 'std/c/statnormcdf' (tier complex, category complex). Exports 6 function(s): normPdf, normCdfApprox, zFromP, standardize, logLikelihood, bivariatePdf.

```
'import "std/c/statnormcdf"' · 'use statnormcdf'
- 'normPdf(x number, mu number, sigma number) → number' - 'normCdfApprox(x number, mu number, sigma number) → number' - 'zFromP(p number) → number' - 'standardize(x number, mu number, sigma number) → number' - 'logLikelihood(data list number, mu number, sigma number) → number' - 'bivariatePdf(x number, y number, rho number) → number'
```

1. Vue d'ensemble

Bibliothèque AFRILANG 'std/c/statnormcdf' (niveau complex, catégorie complex). Elle expose 6 fonction(s) : normPdf, normCdfApprox, zFromP, standardize, logLikelihood, bivariatePdf.

```
'import "std/c/statnormcdf"' · 'use statnormcdf'
```

```
- `normPdf(x number, mu number, sigma number) → number`
- `normCdfApprox(x number, mu number, sigma number) → number`
- `zFromP(p number) → number`
- `standardize(x number, mu number, sigma number) → number`
- `logLikelihood(data list number, mu number, sigma number) → number`
- `bivariatePdf(x number, y number, rho number) → number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/statnormcdf"
use statnormcdf
```

Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés – graphes, NLP, réseaux complexes.

3. Référence API

- normPdf(x number, mu number, sigma number) → number•
- normCdfApprox(x number, mu number, sigma number) → number•
- zFromP(p number) → number•
- standardize(x number, mu number, sigma number) → number•
- logLikelihood(data list number, mu number, sigma number) → number•
- bivariatePdf(x number, y number, rho number) → number

4. Exemples d'utilisation

```
import "std/c/statnormcdf"
use statnormcdf
```

```
create result = normPdf(/* args */)
say result
```

```
create result = normCdfApprox(/* args */)
say result
```

```
create result = zFromP(/* args */)
say result
```

```
create result = standardize(/* args */)
say result
```

```
create result = logLikelihood(/* args */)
say result
```

```
create result = bivariatePdf(/* args */)
say result
```

5. Bonnes pratiques

- Préférez ``import "std/c/statnormcdf"`` en tête de fichier.
- Lancez ``afrilang check`` avant de livrer.
- Combinez avec les modules `stdlib` de la même catégorie.
- Voir `/stdlib/` pour le source live et les démos playground.
- Signalez les problèmes sur GitHub si une export manque.

6. Annexe — source

module `statnormcdf`

```
function normPdf(x number, mu number, sigma number) returns number  
end
```

```
function normCdfApprox(x number, mu number, sigma number) returns number  
end
```

```
function zFromP(p number) returns number  
end
```

```
function standardize(x number, mu number, sigma number) returns number  
end
```

```
function logLikelihood(data list number, mu number, sigma number) returns number  
end
```

```
function bivariatePdf(x number, y number, rho number) returns number  
end  
end
```

English

1. Overview

AFRILANG library 'std/c/statnormcdf' (tier complex, category complex). Exports 6 function(s): normPdf, normCdfApprox, zFromP, standardize, logLikelihood, bivariatePdf.

```
'import "std/c/statnormcdf"' · 'use statnormcdf'
```

```
- `normPdf(x number, mu number, sigma number) → number`
- `normCdfApprox(x number, mu number, sigma number) → number`
- `zFromP(p number) → number`
- `standardize(x number, mu number, sigma number) → number`
- `logLikelihood(data list number, mu number, sigma number) → number`
- `bivariatePdf(x number, y number, rho number) → number`
```

2. Installation & import

Add the module to your program:

```
import "std/c/statnormcdf"
use statnormcdf
```

Tier: complex · Category: Complex modules (c/)
Advanced domains – graphs, NLP, complex networks.

3. API reference

- normPdf(x number, mu number, sigma number) → number•
- normCdfApprox(x number, mu number, sigma number) → number•
- zFromP(p number) → number•
- standardize(x number, mu number, sigma number) → number•
- logLikelihood(data list number, mu number, sigma number) → number•
- bivariatePdf(x number, y number, rho number) → number

4. Usage examples

```
import "std/c/statnormcdf"
use statnormcdf
```

```
create result = normPdf(/* args */)
say result
```

```
create result = normCdfApprox(/* args */)
say result
```

```
create result = zFromP(/* args */)
say result
```

```
create result = standardize(/* args */)
say result
```

```
create result = logLikelihood(/* args */)
say result
```

```
create result = bivariatePdf(/* args */)
say result
```

5. Best practices

- Prefer ``import "std/c/statnormcdf"`` at the top of your file.
- Run ``afrilang check`` before shipping.
- Combine with related stdlib modules from the same category.
- See `/stdlib/` for the live source and playground demos.
- Report issues on GitHub if an export is missing or undocumented.

6. Appendix — source

module statnormcdf

```
function normPdf(x number, mu number, sigma number) returns number
end
```

```
function normCdfApprox(x number, mu number, sigma number) returns number
end
```

```
function zFromP(p number) returns number
end
```

```
function standardize(x number, mu number, sigma number) returns number
end
```

```
function logLikelihood(data list number, mu number, sigma number) returns number
end
```

```
function bivariatePdf(x number, y number, rho number) returns number
end
end
```

Référence rapide / Quick reference

- Import : `import "std/c/statnormcdf"`
- Vérification : `afrilang check`
- Documentation : <https://afrilang.dev/stdlib/std/c/statnormcdf/>

Source (extrait)

```
module statnormcdf

function normPdf(x number, mu number, sigma number) returns number
end

function normCdfApprox(x number, mu number, sigma number) returns number
end

function zFromP(p number) returns number
end

function standardize(x number, mu number, sigma number) returns number
end

function logLikelihood(data list number, mu number, sigma number) returns number
```

```
end  
function bivariatePdf(x number, y number, rho number) returns number  
end  
end
```
