

AFRILANG Stdlib

std/c/tsanomaly

Français. Bibliothèque AFRILANG 'std/c/tsanomaly' (niveau complex, catégorie complex). Elle expose 7 fonction(s) : anomSum, anomMean, anomMin, anomMax, anomVar, anomStd, anomNorm.

```
'import "std/c/tsanomaly"' · 'use tsanomaly'
```

```
- 'anomSum(v list number) → number' - 'anomMean(v list number) →  
number' - 'anomMin(v list number) → number' - 'anomMax(v list num-  
ber) → number' - 'anomVar(v list number) → number' - 'anomStd(v list  
number) → number' - 'anomNorm(v list number) → list number'
```

English. AFRILANG library 'std/c/tsanomaly' (tier complex, category complex). Exports 7 function(s): anomSum, anomMean, anomMin, anomMax, anomVar, anomStd, anomNorm.

```
'import "std/c/tsanomaly"' · 'use tsanomaly'
```

```
- 'anomSum(v list number) → number' - 'anomMean(v list number) →  
number' - 'anomMin(v list number) → number' - 'anomMax(v list num-  
ber) → number' - 'anomVar(v list number) → number' - 'anomStd(v list  
number) → number' - 'anomNorm(v list number) → list number'
```

1. Vue d'ensemble

Bibliothèque AFRILANG 'std/c/tsanomaly' (niveau complex, catégorie complex). Elle expose 7 fonction(s) : anomSum, anomMean, anomMin, anomMax, anomVar, anomStd, anomNorm.

```
'import "std/c/tsanomaly"' · 'use tsanomaly'
```

```
- `anomSum(v list number) → number`
- `anomMean(v list number) → number`
- `anomMin(v list number) → number`
- `anomMax(v list number) → number`
- `anomVar(v list number) → number`
- `anomStd(v list number) → number`
- `anomNorm(v list number) → list number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/tsanomaly"
use tsanomaly
```

Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés – graphes, NLP, réseaux complexes.

3. Référence API

- anomSum(v list number) → number•
anomMean(v list number) → number•
anomMin(v list number) → number•
anomMax(v list number) → number•
anomVar(v list number) → number•
anomStd(v list number) → number•
anomNorm(v list number) → list

4. Exemples d'utilisation

```
import "std/c/tsanomaly"
use tsanomaly
```

```
create result = anomSum(/* args */)
say result
```

```
create result = anomMean(/* args */)
say result
```

```
create result = anomMin(/* args */)
say result
```

```
create result = anomMax(/* args */)
say result
```

```
create result = anomVar(/* args */)
say result
```

```
create result = anomStd(/* args */)
say result
```

5. Bonnes pratiques

- Préférez ``import "std/c/tsanomaly"`` en tête de fichier.
- Lancez ``afriLang check`` avant de livrer.
- Combinez avec les modules `stdlib` de la même catégorie.
- Voir `/stdlib/` pour le source live et les démos playground.
- Signalez les problèmes sur GitHub si une export manque.

6. Annexe — source

module `tsanomaly`

```
function anomSum(v list number) returns number
end
```

```
function anomMean(v list number) returns number
end
```

```
function anomMin(v list number) returns number
end
```

```
function anomMax(v list number) returns number
end
```

```
function anomVar(v list number) returns number
end
```

```
function anomStd(v list number) returns number
end
```

```
function anomNorm(v list number) returns list number
end
end
```

English

1. Overview

AFRILANG library 'std/c/tsanomaly' (tier complex, category complex). Exports 7 function(s): anomSum, anomMean, anomMin, anomMax, anomVar, anomStd, anomNorm.

```
'import "std/c/tsanomaly"' · 'use tsanomaly'
```

```
- `anomSum(v list number) → number`
- `anomMean(v list number) → number`
- `anomMin(v list number) → number`
- `anomMax(v list number) → number`
- `anomVar(v list number) → number`
- `anomStd(v list number) → number`
- `anomNorm(v list number) → list number`
```

2. Installation & import

Add the module to your program:

```
import "std/c/tsanomaly"
use tsanomaly
```

Tier: complex · Category: Complex modules (c/)
Advanced domains – graphs, NLP, complex networks.

3. API reference

- anomSum(v list number) → number•
anomMean(v list number) → number•
anomMin(v list number) → number•
anomMax(v list number) → number•
anomVar(v list number) → number•
anomStd(v list number) → number•
anomNorm(v list number) → list

4. Usage examples

```
import "std/c/tsanomaly"
use tsanomaly
```

```
create result = anomSum(/* args */)
say result
```

```
create result = anomMean(/* args */)
say result
```

```
create result = anomMin(/* args */)
say result
```

```
create result = anomMax(/* args */)
say result
```

```
create result = anomVar(/* args */)
say result
```

```
create result = anomStd(/* args */)
say result
```

5. Best practices

- Prefer ``import "std/c/tsanomaly"`` at the top of your file.
- Run ``afriLang check`` before shipping.
- Combine with related stdlib modules from the same category.
- See `/stdlib/` for the live source and playground demos.
- Report issues on GitHub if an export is missing or undocumented.

6. Appendix — source

module tsanomaly

```
function anomSum(v list number) returns number
end
```

```
function anomMean(v list number) returns number
end
```

```
function anomMin(v list number) returns number
end
```

```
function anomMax(v list number) returns number
end
```

```
function anomVar(v list number) returns number
end
```

```
function anomStd(v list number) returns number
end
```

```
function anomNorm(v list number) returns list number
end
end
```

Référence rapide / Quick reference

- Import : `import "std/c/tsanomaly"`
- Vérification : `afriLang check`
- Documentation : <https://afriLang.dev/stdlib/std/c/tsanomaly/>

Source (excerpt)

```
module tsanomaly

function anomSum(v list number) returns number
end

function anomMean(v list number) returns number
end

function anomMin(v list number) returns number
end

function anomMax(v list number) returns number
end

function anomVar(v list number) returns number
end

function anomStd(v list number) returns number
end

function anomNorm(v list number) returns list number
end
end
```
