

AFRILANG Stdlib

std/calendar

Français. Bibliothèque AFRILANG 'std/calendar' (niveau simple, catégorie time). Elle expose 2 fonction(s) : daysInYear, isLeap.

```
'import "std/calendar"' · 'use calendar'
```

- 'daysInYear(ignored number) → number' - 'isLeap(year number) → bool'

English. AFRILANG library 'std/calendar' (tier simple, category time). Exports 2 function(s): daysInYear, isLeap.

```
'import "std/calendar"' · 'use calendar'
```

- 'daysInYear(ignored number) → number' - 'isLeap(year number) → bool'

Contents

Français

1. Vue d'ensemble

Bibliothèque AFRILANG 'std/calendar' (niveau simple, catégorie time). Elle expose 2 fonction(s) : daysInYear, isLeap.

'import "std/calendar"' · 'use calendar'

```
- `daysInYear(ignored number) → number`
- `isLeap(year number) → bool`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/calendar"
use calendar
```

Niveau : simple · Catégorie : Temps & dates
Horloge, calendrier, délais, formatage temporel.

3. Référence API

- daysInYear(ignored number) → number
- isLeap(year number) → bool

4. Exemples d'utilisation

```
import "std/calendar"
use calendar
```

```
create result = daysInYear(/* args */)
say result
```

```
create result = isLeap(/* args */)
say result
```

5. Bonnes pratiques

- Préférez 'import "std/calendar"' en tête de fichier.
- Lancez 'afri-lang check' avant de livrer.
- Combinez avec les modules stdlib de la même catégorie.
- Voir /stdlib/ pour le source live et les démos playground.
- Signalez les problèmes sur GitHub si une export manque.

6. Annexe — source

module calendar

```
function daysInYear(ignored number) returns number
end
```

```
function isLeap(year number) returns bool
end
end
```

English

1. Overview

AFRILANG library 'std/calendar' (tier simple, category time). Exports 2 function(s): daysInYear, isLeap.

'import "std/calendar"' · 'use calendar'

```
- `daysInYear(ignored number) → number`
- `isLeap(year number) → bool`
```

2. Installation & import

Add the module to your program:

```
import "std/calendar"
use calendar
```

Tier: simple · Category: Time & dates
Clock, calendar, delays, time formatting.

3. API reference

- daysInYear(ignored number) → number•
- isLeap(year number) → bool

4. Usage examples

```
import "std/calendar"
use calendar
```

```
create result = daysInYear(/* args */)
say result
```

```
create result = isLeap(/* args */)
say result
```

5. Best practices

- Prefer `import "std/calendar"` at the top of your file.
- Run `afri-lang check` before shipping.
- Combine with related stdlib modules from the same category.
- See /stdlib/ for the live source and playground demos.
- Report issues on GitHub if an export is missing or undocumented.

6. Appendix — source

module calendar

```
function daysInYear(ignored number) returns number
end
```

```
function isLeap(year number) returns bool
end
end
```

Référence rapide / Quick reference

- Import : `import "std/calendar"`
- Vérification : `afrilang check`
- Documentation : <https://afrilang.dev/stdlib/std/calendar/>

Source (extrait)

```
module calendar

function daysInYear(ignored number) returns number
end

function isLeap(year number) returns bool
end
end
```
