

AFRILANG Stdlib

std/compass

Français. Bibliothèque AFRILANG 'std/compass' (niveau simple, catégorie utilities). Elle expose 2 fonction(s) : bearingDeg, cardinal.

'import "std/compass"' · 'use compass'

- 'bearingDeg(lat1 number, lon1 number, lat2 number, lon2 number) → number' - 'cardinal(deg number) → text'

English. AFRILANG library 'std/compass' (tier simple, category utilities). Exports 2 function(s): bearingDeg, cardinal.

'import "std/compass"' · 'use compass'

- 'bearingDeg(lat1 number, lon1 number, lat2 number, lon2 number) → number' - 'cardinal(deg number) → text'

Contents

Français

1. Vue d'ensemble

Bibliothèque AFRILANG 'std/compass' (niveau simple, catégorie utilities). Elle expose 2 fonction(s) : bearingDeg, cardinal.

'import "std/compass"' · 'use compass'

```
- `bearingDeg(lat1 number, lon1 number, lat2 number, lon2 number) → number`
- `cardinal(deg number) → text`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/compass"
use compass
```

Niveau : simple · Catégorie : Utilitaires
Helpers simples et fonctions ponctuelles.

3. Référence API

- bearingDeg(lat1 number, lon1 number, lat2 number, lon2 number) → number
- cardinal(deg number) → text

4. Exemples d'utilisation

```
import "std/compass"
use compass
```

```
create result = bearingDeg(/* args */)
say result
```

```
create result = cardinal(/* args */)
say result
```

5. Bonnes pratiques

- Préférez 'import "std/compass"' en tête de fichier.
- Lancez 'afirang check' avant de livrer.
- Combinez avec les modules stdlib de la même catégorie.
- Voir /stdlib/ pour le source live et les démos playground.
- Signalez les problèmes sur GitHub si une export manque.

6. Annexe — source

module compass

```
function bearingDeg(lat1 number, lon1 number, lat2 number, lon2 number) returns
  number
end
```

```
function cardinal(deg number) returns text  
end  
end
```

English

1. Overview

AFRILANG library 'std/compass' (tier simple, category utilities). Exports 2 function(s): bearingDeg, cardinal.

'import "std/compass"' · 'use compass'

```
- `bearingDeg(lat1 number, lon1 number, lat2 number, lon2 number) → number`  
- `cardinal(deg number) → text`
```

2. Installation & import

Add the module to your program:

```
import "std/compass"  
use compass
```

Tier: simple · Category: Utilities
Simple helpers and single-purpose functions.

3. API reference

- bearingDeg(lat1 number, lon1 number, lat2 number, lon2 number) → number
cardinal(deg number) → text

4. Usage examples

```
import "std/compass"  
use compass
```

```
create result = bearingDeg(/* args */)   
say result
```

```
create result = cardinal(/* args */)   
say result
```

5. Best practices

- Prefer `import "std/compass"` at the top of your file.
Run `afrilang check` before shipping.
Combine with related stdlib modules from the same category.
See /stdlib/ for the live source and playground demos.
Report issues on GitHub if an export is missing or undocumented.

6. Appendix — source

module compass

```
function bearingDeg(lat1 number, lon1 number, lat2 number, lon2 number) returns  
  number  
end
```

```
function cardinal(deg number) returns text
end
end
```

Référence rapide / Quick reference

- Import : `import "std/compass"`
- Vérification : `afrilang check`
- Documentation : <https://afrilang.dev/stdlib/std/compass/>

Source (extrait)

```
module compass

function bearingDeg(lat1 number, lon1 number, lat2 number, lon2 number) returns
    number
end

function cardinal(deg number) returns text
end
end
```
