

AFRILANG Stdlib

std/httpcode

Français. Bibliothèque AFRILANG 'std/httpcode' (niveau simple, catégorie network). Elle expose 2 fonction(s) : isSuccess, isRedirect.

'import "std/httpcode"' · 'use httpcode'

- 'isSuccess(code number) → bool' - 'isRedirect(code number) → bool'

English. AFRILANG library 'std/httpcode' (tier simple, category network). Exports 2 function(s): isSuccess, isRedirect.

'import "std/httpcode"' · 'use httpcode'

- 'isSuccess(code number) → bool' - 'isRedirect(code number) → bool'

Contents

Français

1. Vue d'ensemble

Bibliothèque AFRILANG 'std/httpcode' (niveau simple, catégorie network). Elle expose 2 fonction(s) : isSuccess, isRedirect.

'import "std/httpcode"' · 'use httpcode'

```
- `isSuccess(code number) → bool`
- `isRedirect(code number) → bool`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/httpcode"
use httpcode
```

Niveau : simple · Catégorie : Réseau
HTTP, sockets, protocoles, DNS.

3. Référence API

- isSuccess(code number) → bool
- isRedirect(code number) → bool

4. Exemples d'utilisation

```
import "std/httpcode"
use httpcode
```

```
create result = isSuccess(/* args */)
say result
```

```
create result = isRedirect(/* args */)
say result
```

5. Bonnes pratiques

- Préférez 'import "std/httpcode"' en tête de fichier.
- Lancez 'afrilang check' avant de livrer.
- Combinez avec les modules stdlib de la même catégorie.
- Voir /stdlib/ pour le source live et les démos playground.
- Signalez les problèmes sur GitHub si une export manque.

6. Annexe — source

module httpcode

```
function isSuccess(code number) returns bool
end
```

```
function isRedirect(code number) returns bool
end
end
```

English

1. Overview

AFRILANG library 'std/httpcode' (tier simple, category network). Exports 2 function(s): isSuccess, isRedirect.

'import "std/httpcode"' · 'use httpcode'

```
- `isSuccess(code number) → bool`  
- `isRedirect(code number) → bool`
```

2. Installation & import

Add the module to your program:

```
import "std/httpcode"  
use httpcode
```

Tier: simple · Category: Networking
HTTP, sockets, protocols, DNS.

3. API reference

- isSuccess(code number) → bool
isRedirect(code number) → bool

4. Usage examples

```
import "std/httpcode"  
use httpcode
```

```
create result = isSuccess(/* args */)   
say result
```

```
create result = isRedirect(/* args */)   
say result
```

5. Best practices

- Prefer `import "std/httpcode"` at the top of your file.
Run `afrilang check` before shipping.
Combine with related stdlib modules from the same category.
See /stdlib/ for the live source and playground demos.
Report issues on GitHub if an export is missing or undocumented.

6. Appendix — source

module httpcode

```
function isSuccess(code number) returns bool  
end
```

```
function isRedirect(code number) returns bool  
end  
end
```

Référence rapide / Quick reference

- Import : `import "std/httpcode"`
- Vérification : `afrilang check`
- Documentation : <https://afrilang.dev/stdlib/std/httpcode/>

Source (extrait)

```
module httpcode

function isSuccess(code number) returns bool
end

function isRedirect(code number) returns bool
end
end
```
