

AFRILANG Stdlib

std/interest

Français. Bibliothèque AFRILANG 'std/interest' (niveau simple, catégorie text). Elle expose 2 fonction(s) : simpleInterest, compoundOnce.
'import "std/interest"' · 'use interest'

- 'simpleInterest(principal number, rate number, years number) → number' - 'compoundOnce(principal number, rate number) → number' **En-**

glish. AFRILANG library 'std/interest' (tier simple, category text). Exports 2 function(s): simpleInterest, compoundOnce.

'import "std/interest"' · 'use interest'

- 'simpleInterest(principal number, rate number, years number) → number' - 'compoundOnce(principal number, rate number) → number'

Contents

Français

1. Vue d'ensemble

Bibliothèque AFRILANG 'std/interest' (niveau simple, catégorie text). Elle expose 2 fonction(s) : simpleInterest, compoundOnce.

'import "std/interest"' · 'use interest'

```
- `simpleInterest(principal number, rate number, years number) → number`
- `compoundOnce(principal number, rate number) → number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/interest"
use interest
```

Niveau : simple · Catégorie : Texte & chaînes
Manipulation de texte, regex, formatage, parsing.

3. Référence API

- simpleInterest(principal number, rate number, years number) → number
- compoundOnce(principal number, rate number) → number

4. Exemples d'utilisation

```
import "std/interest"
use interest
```

```
create result = simpleInterest(/* args */)
say result
```

```
create result = compoundOnce(/* args */)
say result
```

5. Bonnes pratiques

- Préférez `import "std/interest"` en tête de fichier.
- Lancez `afri-lang check` avant de livrer.
- Combinez avec les modules stdlib de la même catégorie.
- Voir /stdlib/ pour le source live et les démos playground.
- Signalez les problèmes sur GitHub si une export manque.

6. Annexe — source

module interest

```
function simpleInterest(principal number, rate number, years number) returns number
end
```

```
function compoundOnce(principal number, rate number) returns number
end
end
```

English

1. Overview

AFRILANG library 'std/interest' (tier simple, category text). Exports 2 function(s): simpleInterest, compoundOnce.

'import "std/interest"' · 'use interest'

```
- `simpleInterest(principal number, rate number, years number) → number`
- `compoundOnce(principal number, rate number) → number`
```

2. Installation & import

Add the module to your program:

```
import "std/interest"
use interest
```

Tier: simple · Category: Text & strings
Text manipulation, regex, formatting, parsing.

3. API reference

- simpleInterest(principal number, rate number, years number) → number
- compoundOnce(principal number, rate number) → number

4. Usage examples

```
import "std/interest"
use interest
```

```
create result = simpleInterest(/* args */)
say result
```

```
create result = compoundOnce(/* args */)
say result
```

5. Best practices

- Prefer `import "std/interest"` at the top of your file.
- Run `afri-lang check` before shipping.
- Combine with related stdlib modules from the same category.
- See /stdlib/ for the live source and playground demos.
- Report issues on GitHub if an export is missing or undocumented.

6. Appendix — source

module interest

```
function simpleInterest(principal number, rate number, years number) returns number
end
```

```
function compoundOnce(principal number, rate number) returns number
end
end
```

Référence rapide / Quick reference

- Import : `import "std/interest"`
- Vérification : `afrilang check`
- Documentation : <https://afrilang.dev/stdlib/std/interest/>

Source (extrait)

```
module interest

function simpleInterest(principal number, rate number, years number) returns number
end

function compoundOnce(principal number, rate number) returns number
end
end
```
