

AFRILANG Stdlib

std/m/datecalc

Français. Bibliothèque AFRILANG 'std/m/datecalc' (niveau medium, catégorie medium). Elle expose 5 fonction(s) : daysBetween, addDays, isLeapYear, daysInMonth, weekday.

```
'import "std/m/datecalc"' · 'use datecalc'
```

```
- 'daysBetween(d1 text, d2 text) → number' - 'addDays(date text,  
days number) → text' - 'isLeapYear(year number) → bool' - 'daysIn-  
Month(year number, month number) → number' - 'weekday(date text)  
→ number'
```

English. AFRILANG library 'std/m/datecalc' (tier medium, category medium). Exports 5 function(s): daysBetween, addDays, isLeapYear, daysInMonth, weekday.

```
'import "std/m/datecalc"' · 'use datecalc'
```

```
- 'daysBetween(d1 text, d2 text) → number' - 'addDays(date text,  
days number) → text' - 'isLeapYear(year number) → bool' - 'daysIn-  
Month(year number, month number) → number' - 'weekday(date text)  
→ number'
```

1. Vue d'ensemble

Bibliothèque AFRILANG 'std/m/datecalc' (niveau medium, catégorie medium). Elle expose 5 fonction(s) : daysBetween, addDays, isLeapYear, daysInMonth, weekday.

'import "std/m/datecalc"' · 'use datecalc'

```
- `daysBetween(d1 text, d2 text) → number`
- `addDays(date text, days number) → text`
- `isLeapYear(year number) → bool`
- `daysInMonth(year number, month number) → number`
- `weekday(date text) → number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/m/datecalc"
use datecalc
```

Niveau : medium · Catégorie : Modules medium (m/)
Bibliothèques intermédiaires – import std/m.../

3. Référence API

- daysBetween(d1 text, d2 text) → number•
- addDays(date text, days number) → text•
- isLeapYear(year number) → bool•
- daysInMonth(year number, month number) → number•
- weekday(date text) → number

4. Exemples d'utilisation

```
import "std/m/datecalc"
use datecalc
```

```
create result = daysBetween(/* args */)
say result
```

```
create result = addDays(/* args */)
say result
```

```
create result = isLeapYear(/* args */)
say result
```

```
create result = daysInMonth(/* args */)
say result
```

```
create result = weekday(/* args */)
say result
```

5. Bonnes pratiques

- Préférez ``import "std/m/datecalc"`` en tête de fichier.
- Lancez ``afrilang check`` avant de livrer.
- Combinez avec les modules stdlib de la même catégorie.
- Voir `/stdlib/` pour le source live et les démos playground.
- Signalez les problèmes sur GitHub si une export manque.

6. Annexe — source

module datecalc

```
function daysBetween(d1 text, d2 text) returns number
end
```

```
function addDays(date text, days number) returns text
end
```

```
function isLeapYear(year number) returns bool
end
```

```
function daysInMonth(year number, month number) returns number
end
```

```
function weekday(date text) returns number
end
end
```

English

1. Overview

AFRILANG library 'std/m/datecalc' (tier medium, category medium). Exports 5 function(s): daysBetween, addDays, isLeapYear, daysInMonth, weekday.

'import "std/m/datecalc"' · 'use datecalc'

```
- `daysBetween(d1 text, d2 text) → number`  
- `addDays(date text, days number) → text`  
- `isLeapYear(year number) → bool`  
- `daysInMonth(year number, month number) → number`  
- `weekday(date text) → number`
```

2. Installation & import

Add the module to your program:

```
import "std/m/datecalc"  
use datecalc
```

Tier: medium · Category: Medium modules (m/)
Intermediate libraries – import std/m.../

3. API reference

- daysBetween(d1 text, d2 text) → number
- addDays(date text, days number) → text
- isLeapYear(year number) → bool
- daysInMonth(year number, month number) → number
- weekday(date text) → number

4. Usage examples

```
import "std/m/datecalc"  
use datecalc
```

```
create result = daysBetween(/* args */)   
say result
```

```
create result = addDays(/* args */)   
say result
```

```
create result = isLeapYear(/* args */)   
say result
```

```
create result = daysInMonth(/* args */)   
say result
```

```
create result = weekday(/* args */)   
say result
```

5. Best practices

- Prefer ``import "std/m/datecalc"`` at the top of your file.
- Run ``afrilang check`` before shipping.
- Combine with related stdlib modules from the same category.
- See `/stdlib/` for the live source and playground demos.
- Report issues on GitHub if an export is missing or undocumented.

6. Appendix — source

module datecalc

```
function daysBetween(d1 text, d2 text) returns number
end
```

```
function addDays(date text, days number) returns text
end
```

```
function isLeapYear(year number) returns bool
end
```

```
function daysInMonth(year number, month number) returns number
end
```

```
function weekday(date text) returns number
end
end
```

Référence rapide / Quick reference

- Import : `import "std/m/datecalc"`
- Vérification : `afrilang check`
- Documentation : <https://afrilang.dev/stdlib/std/m/datecalc/>

Source (extrait)

```
module datecalc

function daysBetween(d1 text, d2 text) returns number
end

function addDays(date text, days number) returns text
end

function isLeapYear(year number) returns bool
end

function daysInMonth(year number, month number) returns number
end

function weekday(date text) returns number
end
end
```
