

AFRILANG Stdlib

std/m/finance2

Français. Bibliothèque AFRILANG 'std/m/finance2' (niveau medium, catégorie medium). Elle expose 4 fonction(s) : futureValue, presentValue, annuity, payment.

```
'import "std/m/finance2"' · 'use finance2'
```

- 'futureValue(pv number, rate number, periods number) → number'
- 'presentValue(fv number, rate number, periods number) → number'
- 'annuity(payment number, rate number, periods number) → number'
- 'payment(pv number, rate number, periods number) → number'

English. AFRILANG library 'std/m/finance2' (tier medium, category medium). Exports 4 function(s): futureValue, presentValue, annuity, payment.

```
'import "std/m/finance2"' · 'use finance2'
```

- 'futureValue(pv number, rate number, periods number) → number'
- 'presentValue(fv number, rate number, periods number) → number'
- 'annuity(payment number, rate number, periods number) → number'
- 'payment(pv number, rate number, periods number) → number'

Français

1. Vue d'ensemble

Bibliothèque AFRILANG 'std/m/finance2' (niveau medium, catégorie medium). Elle expose 4 fonction(s) : futureValue, presentValue, annuity, payment.

```
'import "std/m/finance2"' · 'use finance2'
```

```
- `futureValue(pv number, rate number, periods number) → number`
- `presentValue(fv number, rate number, periods number) → number`
- `annuity(payment number, rate number, periods number) → number`
- `payment(pv number, rate number, periods number) → number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/m/finance2"
use finance2
```

Niveau : medium · Catégorie : Modules medium (m/)
Bibliothèques intermédiaires – import std/m.../

3. Référence API

- futureValue(pv number, rate number, periods number) → number•
presentValue(fv number, rate number, periods number) → number•
annuity(payment number, rate number, periods number) → number•
payment(pv number, rate number, periods number) → number

4. Exemples d'utilisation

```
import "std/m/finance2"
use finance2
```

```
create result = futureValue(/* args */)
say result
```

```
create result = presentValue(/* args */)
say result
```

```
create result = annuity(/* args */)
say result
```

```
create result = payment(/* args */)
say result
```

5. Bonnes pratiques

- Préférez `import "std/m/finance2"` en tête de fichier.
- Lancez `afirang check` avant de livrer.
- Combinez avec les modules stdlib de la même catégorie.
- Voir /stdlib/ pour le source live et les démos playground.
- Signalez les problèmes sur GitHub si une export manque.

6. Annexe — source

module finance2

```
function futureValue(pv number, rate number, periods number) returns number  
end
```

```
function presentValue(fv number, rate number, periods number) returns number  
end
```

```
function annuity(payment number, rate number, periods number) returns number  
end
```

```
function payment(pv number, rate number, periods number) returns number  
end  
end
```

English

1. Overview

AFRILANG library 'std/m/finance2' (tier medium, category medium). Exports 4 function(s): futureValue, presentValue, annuity, payment.

```
'import "std/m/finance2"' · 'use finance2'
```

```
- `futureValue(pv number, rate number, periods number) → number`  
- `presentValue(fv number, rate number, periods number) → number`  
- `annuity(payment number, rate number, periods number) → number`  
- `payment(pv number, rate number, periods number) → number`
```

2. Installation & import

Add the module to your program:

```
import "std/m/finance2"  
use finance2
```

Tier: medium · Category: Medium modules (m/)
Intermediate libraries – import std/m.../

3. API reference

- futureValue(pv number, rate number, periods number) → number•
presentValue(fv number, rate number, periods number) → number•
annuity(payment number, rate number, periods number) → number•
payment(pv number, rate number, periods number) → number

4. Usage examples

```
import "std/m/finance2"  
use finance2
```

```
create result = futureValue(/* args */)   
say result
```

```
create result = presentValue(/* args */)   
say result
```

```
create result = annuity(/* args */)   
say result
```

```
create result = payment(/* args */)   
say result
```

5. Best practices

- Prefer `import "std/m/finance2"` at the top of your file. •
Run `afrilang check` before shipping. •
Combine with related stdlib modules from the same category. •
See /stdlib/ for the live source and playground demos. •
Report issues on GitHub if an export is missing or undocumented.

6. Appendix — source

module finance2

```
function futureValue(pv number, rate number, periods number) returns number
end
```

```
function presentValue(fv number, rate number, periods number) returns number
end
```

```
function annuity(payment number, rate number, periods number) returns number
end
```

```
function payment(pv number, rate number, periods number) returns number
end
end
```

Référence rapide / Quick reference

- Import : `import "std/m/finance2"`
- Vérification : `afrilang check`
- Documentation : <https://afrilang.dev/stdlib/std/m/finance2/>

Source (extrait)

```
module finance2

function futureValue(pv number, rate number, periods number) returns number
end

function presentValue(fv number, rate number, periods number) returns number
end

function annuity(payment number, rate number, periods number) returns number
end

function payment(pv number, rate number, periods number) returns number
end
end
```
