

# AFRILANG Stdlib

## std/m/listpartition

**Français.** Bibliothèque AFRILANG 'std/m/listpartition' (niveau medium, catégorie medium). Elle expose 5 fonction(s) : partitionAt, splitHalf, secondHalf, filterGt, filterLt.

'import "std/m/listpartition"' · 'use listpartition'

- 'partitionAt(v list number, pivot number) → list number' - 'splitHalf(v list number) → list number' - 'secondHalf(v list number) → list number' - 'filterGt(v list number, threshold number) → list number' - 'filterLt(v list number, threshold number) → list number'

**English.** AFRILANG library 'std/m/listpartition' (tier medium, category medium). Exports 5 function(s): partitionAt, splitHalf, secondHalf, filterGt, filterLt.

'import "std/m/listpartition"' · 'use listpartition'

- 'partitionAt(v list number, pivot number) → list number' - 'splitHalf(v list number) → list number' - 'secondHalf(v list number) → list number' - 'filterGt(v list number, threshold number) → list number' - 'filterLt(v list number, threshold number) → list number'

### 1. Vue d'ensemble

Bibliothèque AFRILANG 'std/m/listpartition' (niveau medium, catégorie medium). Elle expose 5 fonction(s) : partitionAt, splitHalf, secondHalf, filterGt, filterLt.

'import "std/m/listpartition"' · 'use listpartition'

```
- `partitionAt(v list number, pivot number) → list number`
- `splitHalf(v list number) → list number`
- `secondHalf(v list number) → list number`
- `filterGt(v list number, threshold number) → list number`
- `filterLt(v list number, threshold number) → list number`
```

### 2. Installation & import

Ajoutez le module à votre programme :

```
import "std/m/listpartition"
use listpartition
```

Niveau : medium · Catégorie : Modules medium (m/)  
Bibliothèques intermédiaires – import std/m.../

### 3. Référence API

- partitionAt(v list number, pivot number) → list
- splitHalf(v list number) → list
- secondHalf(v list number) → list
- filterGt(v list number, threshold number) → list
- filterLt(v list number, threshold number) → list

### 4. Exemples d'utilisation

```
import "std/m/listpartition"
use listpartition
```

```
create result = partitionAt(/* args */)
say result
```

```
create result = splitHalf(/* args */)
say result
```

```
create result = secondHalf(/* args */)
say result
```

```
create result = filterGt(/* args */)
say result
```

```
create result = filterLt(/* args */)
say result
```

## 5. Bonnes pratiques

- Préférez ``import "std/m/listpartition"`` en tête de fichier.
- Lancez ``afriLang check`` avant de livrer.
- Combinez avec les modules `stdlib` de la même catégorie.
- Voir `/stdlib/` pour le source live et les démos playground.
- Signalez les problèmes sur GitHub si une export manque.

## 6. Annexe — source

module `listpartition`

```
function partitionAt(v list number, pivot number) returns list number  
end
```

```
function splitHalf(v list number) returns list number  
end
```

```
function secondHalf(v list number) returns list number  
end
```

```
function filterGt(v list number, threshold number) returns list number  
end
```

```
function filterLt(v list number, threshold number) returns list number  
end  
end
```

## English

### 1. Overview

AFRILANG library 'std/m/listpartition' (tier medium, category medium). Exports 5 function(s): partitionAt, splitHalf, secondHalf, filterGt, filterLt.

'import "std/m/listpartition"' · 'use listpartition'

```
- `partitionAt(v list number, pivot number) → list number`
- `splitHalf(v list number) → list number`
- `secondHalf(v list number) → list number`
- `filterGt(v list number, threshold number) → list number`
- `filterLt(v list number, threshold number) → list number`
```

### 2. Installation & import

Add the module to your program:

```
import "std/m/listpartition"
use listpartition
```

Tier: medium · Category: Medium modules (m/)  
Intermediate libraries – import std/m.../

### 3. API reference

- partitionAt(v list number, pivot number) → list•
- splitHalf(v list number) → list•
- secondHalf(v list number) → list•
- filterGt(v list number, threshold number) → list•
- filterLt(v list number, threshold number) → list

### 4. Usage examples

```
import "std/m/listpartition"
use listpartition
```

```
create result = partitionAt(/* args */)
say result
```

```
create result = splitHalf(/* args */)
say result
```

```
create result = secondHalf(/* args */)
say result
```

```
create result = filterGt(/* args */)
say result
```

```
create result = filterLt(/* args */)
say result
```

## 5. Best practices

- Prefer ``import "std/m/listpartition"`` at the top of your file.
- Run ``afrilang check`` before shipping.
- Combine with related stdlib modules from the same category.
- See `/stdlib/` for the live source and playground demos.
- Report issues on GitHub if an export is missing or undocumented.

## 6. Appendix — source

module listpartition

```
function partitionAt(v list number, pivot number) returns list number
end
```

```
function splitHalf(v list number) returns list number
end
```

```
function secondHalf(v list number) returns list number
end
```

```
function filterGt(v list number, threshold number) returns list number
end
```

```
function filterLt(v list number, threshold number) returns list number
end
end
```

## Référence rapide / Quick reference

- Import : `import "std/m/listpartition"`
- Vérification : `afrilang check`
- Documentation : <https://afrilang.dev/stdlib/std/m/listpartition/>

## Source (extrait)

```
module listpartition

function partitionAt(v list number, pivot number) returns list number
end

function splitHalf(v list number) returns list number
end

function secondHalf(v list number) returns list number
end

function filterGt(v list number, threshold number) returns list number
end

function filterLt(v list number, threshold number) returns list number
end
end
```
