

AFRILANG Stdlib

std/seq

Français. Bibliothèque AFRILANG 'std/seq' (niveau simple, catégorie utilities). Elle expose 2 fonction(s) : arithmetic, geometric.

'import "std/seq"' · 'use seq'

- 'arithmetic(a number, d number, n number) → number' - 'geometric(a number, r number, n number) → number'

English. AFRILANG library 'std/seq' (tier simple, category utilities). Exports 2 function(s): arithmetic, geometric.

'import "std/seq"' · 'use seq'

- 'arithmetic(a number, d number, n number) → number' - 'geometric(a number, r number, n number) → number'

Contents

Français

1. Vue d'ensemble

Bibliothèque AFRILANG 'std/seq' (niveau simple, catégorie utilities). Elle expose 2 fonction(s) : arithmetic, geometric.

'import "std/seq"' · 'use seq'

```
- `arithmetic(a number, d number, n number) → number`
- `geometric(a number, r number, n number) → number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/seq"
use seq
```

Niveau : simple · Catégorie : Utilitaires
Helpers simples et fonctions ponctuelles.

3. Référence API

- arithmetic(a number, d number, n number) → number
- geometric(a number, r number, n number) → number

4. Exemples d'utilisation

```
import "std/seq"
use seq
```

```
create result = arithmetic(/* args */)
say result
```

```
create result = geometric(/* args */)
say result
```

5. Bonnes pratiques

- Préférez 'import "std/seq"' en tête de fichier.
- Lancez 'afrilang check' avant de livrer.
- Combinez avec les modules stdlib de la même catégorie.
- Voir /stdlib/ pour le source live et les démos playground.
- Signalez les problèmes sur GitHub si une export manque.

6. Annexe — source

module seq

```
function arithmetic(a number, d number, n number) returns number
end
```

```
function geometric(a number, r number, n number) returns number
end
end
```

English

1. Overview

AFRILANG library 'std/seq' (tier simple, category utilities). Exports 2 function(s): arithmetic, geometric.

'import "std/seq"' · 'use seq'

```
- `arithmetic(a number, d number, n number) → number`
- `geometric(a number, r number, n number) → number`
```

2. Installation & import

Add the module to your program:

```
import "std/seq"
use seq
```

Tier: simple · Category: Utilities
Simple helpers and single-purpose functions.

3. API reference

- arithmetic(a number, d number, n number) → number
- geometric(a number, r number, n number) → number

4. Usage examples

```
import "std/seq"
use seq
```

```
create result = arithmetic(/* args */)
say result
```

```
create result = geometric(/* args */)
say result
```

5. Best practices

- Prefer 'import "std/seq"' at the top of your file.
- Run 'afrilang check' before shipping.
- Combine with related stdlib modules from the same category.
- See /stdlib/ for the live source and playground demos.
- Report issues on GitHub if an export is missing or undocumented.

6. Appendix — source

module seq

```
function arithmetic(a number, d number, n number) returns number
end
```

```
function geometric(a number, r number, n number) returns number
end
end
```

Référence rapide / Quick reference

- Import : `import "std/seq"`
- Vérification : `afrilang check`
- Documentation : <https://afrilang.dev/stdlib/std/seq/>

Source (extrait)

```
module seq

function arithmetic(a number, d number, n number) returns number
end

function geometric(a number, r number, n number) returns number
end
end
```
