

AFRILANG Stdlib

std/c/parsecsvadv

Bibliothèque AFRILANG `std/c/parsecsvadv` (niveau complex, catégorie complex). Elle expose 8 fonction(s) : csvLen, csvUp

```
`import "std/c/parsecsvadv" · `use parsecsvadv`
```

- `csvLen(s text) ? number`
- `csvUpper(s text) ? text`
- `csvLower(s text) ? text`
- `csvTrim(s text) ? text`
- `csvSplit(s text, delim text) ? list text`
- `csvJoin(parts list text, delim text) ? text`
- `csvReplace(s text, from text, to text) ? text`
- `parseRow(line text, delim text) ? list text`

Category: complex | Tier: complex | Functions: 8

FRANCAIS

1. Vue d'ensemble

Bibliothèque AFRILANG `std/c/parsecsvadv` (niveau complexe, catégorie complexe). Elle expose 8 fonction(s) : csvLen, csvUp

```
`import "std/c/parsecsvadv" . `use parsecsvadv`  
- `csvLen(s text) ? number`  
- `csvUpper(s text) ? text`  
- `csvLower(s text) ? text`  
- `csvTrim(s text) ? text`  
- `csvSplit(s text, delim text) ? list text`  
- `csvJoin(parts list text, delim text) ? text`  
- `csvReplace(s text, from text, to text) ? text`  
- `parseRow(line text, delim text) ? list text`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/parsecsvadv"  
use parsecsvadv
```

Niveau : complexe · Catégorie : Modules complexe (c/)
Domaines avancés ? graphes, NLP, réseaux complexes.

3. Référence API

```
? csvLen(s text) ? number  
? csvUpper(s text) ? text  
? csvLower(s text) ? text  
? csvTrim(s text) ? text  
? csvSplit(s text, delim text) ? list  
? csvJoin(parts list text, delim text) ? text  
? csvReplace(s text, from text, to text) ? text  
? parseRow(line text, delim text) ? list
```

4. Exemples d'utilisation

```
import "std/c/parsecsvadv"  
use parsecsvadv  
  
create result = csvLen(/* args */)   
say result  
  
create result = csvUpper(/* args */)   
say result  
  
create result = csvLower(/* args */)   
say result  
  
create result = csvTrim(/* args */)   
say result  
  
create result = csvSplit(/* args */)   
say result  
  
create result = csvJoin(/* args */)   
say result
```

5. Bonnes pratiques

```
? Préférez `import "std/c/parsecsvadv"` en tête de fichier.  
? Lancez `afrilang check` avant de livrer.  
? Combinez avec les modules stdlib de la même catégorie.  
? Voir /stdlib/ pour le source live et les démos playground.  
? Signalez les problèmes sur GitHub si une export manque.
```

6. Annexe ? source

```
module parsecsvadv
function csvLen(s text) returns number
end
function csvUpper(s text) returns text
end
function csvLower(s text) returns text
end
function csvTrim(s text) returns text
end
function csvSplit(s text, delim text) returns list text
end
function csvJoin(parts list text, delim text) returns text
end
function csvReplace(s text, from text, to text) returns text
end
function parseRow(line text, delim text) returns list text
end
end
```

ENGLISH

1. Overview

AFRILANG library `std/c/parsecsvadv` (tier complex, category complex). Exports 8 function(s): csvLen, csvUpper, csvLower

```
`import "std/c/parsecsvadv" . `use parsecsvadv`  
- `csvLen(s text) ? number`  
- `csvUpper(s text) ? text`  
- `csvLower(s text) ? text`  
- `csvTrim(s text) ? text`  
- `csvSplit(s text, delim text) ? list text`  
- `csvJoin(parts list text, delim text) ? text`  
- `csvReplace(s text, from text, to text) ? text`  
- `parseRow(line text, delim text) ? list text`
```

2. Installation & import

Add the module to your program:

```
import "std/c/parsecsvadv"  
use parsecsvadv
```

Tier: complex · Category: Complex modules (c/)
Advanced domains ? graphs, NLP, complex networks.

3. API reference

```
? csvLen(s text) ? number  
? csvUpper(s text) ? text  
? csvLower(s text) ? text  
? csvTrim(s text) ? text  
? csvSplit(s text, delim text) ? list  
? csvJoin(parts list text, delim text) ? text  
? csvReplace(s text, from text, to text) ? text  
? parseRow(line text, delim text) ? list
```

4. Usage examples

```
import "std/c/parsecsvadv"  
use parsecsvadv  
  
create result = csvLen(/* args */)   
say result  
  
create result = csvUpper(/* args */)   
say result  
  
create result = csvLower(/* args */)   
say result  
  
create result = csvTrim(/* args */)   
say result  
  
create result = csvSplit(/* args */)   
say result  
  
create result = csvJoin(/* args */)   
say result
```

5. Best practices

```
? Prefer `import "std/c/parsecsvadv"` at the top of your file.  
? Run `afrilang check` before shipping.  
? Combine with related stdlib modules from the same category.  
? See /stdlib/ for the live source and playground demos.  
? Report issues on GitHub if an export is missing or undocumented.
```

6. Appendix ? source

```
module parsecsvadv
function csvLen(s text) returns number
end
function csvUpper(s text) returns text
end
function csvLower(s text) returns text
end
function csvTrim(s text) returns text
end
function csvSplit(s text, delim text) returns list text
end
function csvJoin(parts list text, delim text) returns text
end
function csvReplace(s text, from text, to text) returns text
end
function parseRow(line text, delim text) returns list text
end
end
```
