

AFRILANG Stdlib

std/c/sigderivative

Bibliothèque AFRILANG `std/c/sigderivative` (niveau complex, catégorie complex). Elle expose 7 fonction(s) :
deriSum, de

```
`import "std/c/sigderivative" . `use sigderivative`
```

- `deriSum(v list number) ? number`
- `deriMean(v list number) ? number`
- `deriMin(v list number) ? number`
- `deriMax(v list number) ? number`
- `deriVar(v list number) ? number`
- `deriStd(v list number) ? number`
- `deriNorm(v list number) ? list number`

Category: complex | Tier: complex | Functions: 7

FRANCAIS

1. Vue d'ensemble

Bibliothèque AFRILANG `std/c/sigderivative` (niveau complex, catégorie complex). Elle expose 7 fonction(s) : `deriSum`, de

```
`import "std/c/sigderivative" . `use sigderivative`  
- `deriSum(v list number) ? number`  
- `deriMean(v list number) ? number`  
- `deriMin(v list number) ? number`  
- `deriMax(v list number) ? number`  
- `deriVar(v list number) ? number`  
- `deriStd(v list number) ? number`  
- `deriNorm(v list number) ? list number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/sigderivative"  
use sigderivative
```

Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés ? graphes, NLP, réseaux complexes.

3. Référence API

```
? deriSum(v list number) ? number  
? deriMean(v list number) ? number  
? deriMin(v list number) ? number  
? deriMax(v list number) ? number  
? deriVar(v list number) ? number  
? deriStd(v list number) ? number  
? deriNorm(v list number) ? list
```

4. Exemples d'utilisation

```
import "std/c/sigderivative"  
use sigderivative  
  
create result = deriSum(/* args */)   
say result  
  
create result = deriMean(/* args */)   
say result  
  
create result = deriMin(/* args */)   
say result  
  
create result = deriMax(/* args */)   
say result  
  
create result = deriVar(/* args */)   
say result  
  
create result = deriStd(/* args */)   
say result
```

5. Bonnes pratiques

- ? Préférez ``import "std/c/sigderivative"``` en tête de fichier.
- ? Lancez ``afirang check`` avant de livrer.
- ? Combinez avec les modules `stdlib` de la même catégorie.
- ? Voir `/stdlib/` pour le source live et les démos playground.
- ? Signalez les problèmes sur GitHub si une export manque.

6. Annexe ? source

```
module sigderivative
```

```
function deriSum(v list number) returns number
end

function deriMean(v list number) returns number
end

function deriMin(v list number) returns number
end

function deriMax(v list number) returns number
end

function deriVar(v list number) returns number
end

function deriStd(v list number) returns number
end

function deriNorm(v list number) returns list number
end
end
```

ENGLISH

1. Overview

AFRILANG library `std/c/sigderivative` (tier complex, category complex). Exports 7 function(s): `deriSum`, `deriMean`, `deriM`

```
`import "std/c/sigderivative" . `use sigderivative`  
- `deriSum(v list number) ? number`  
- `deriMean(v list number) ? number`  
- `deriMin(v list number) ? number`  
- `deriMax(v list number) ? number`  
- `deriVar(v list number) ? number`  
- `deriStd(v list number) ? number`  
- `deriNorm(v list number) ? list number`
```

2. Installation & import

Add the module to your program:

```
import "std/c/sigderivative"  
use sigderivative
```

Tier: complex · Category: Complex modules (c/)
Advanced domains ? graphs, NLP, complex networks.

3. API reference

```
? deriSum(v list number) ? number  
? deriMean(v list number) ? number  
? deriMin(v list number) ? number  
? deriMax(v list number) ? number  
? deriVar(v list number) ? number  
? deriStd(v list number) ? number  
? deriNorm(v list number) ? list
```

4. Usage examples

```
import "std/c/sigderivative"  
use sigderivative  
  
create result = deriSum(/* args */)   
say result  
  
create result = deriMean(/* args */)   
say result  
  
create result = deriMin(/* args */)   
say result  
  
create result = deriMax(/* args */)   
say result  
  
create result = deriVar(/* args */)   
say result  
  
create result = deriStd(/* args */)   
say result
```

5. Best practices

```
? Prefer `import "std/c/sigderivative"` at the top of your file.  
? Run `afriLang check` before shipping.  
? Combine with related stdlib modules from the same category.  
? See /stdlib/ for the live source and playground demos.  
? Report issues on GitHub if an export is missing or undocumented.
```

6. Appendix ? source

```
module sigderivative
```

```
function deriSum(v list number) returns number
end

function deriMean(v list number) returns number
end

function deriMin(v list number) returns number
end

function deriMax(v list number) returns number
end

function deriVar(v list number) returns number
end

function deriStd(v list number) returns number
end

function deriNorm(v list number) returns list number
end
end
```
