

AFRILANG Stdlib

std/c/simbirth

Bibliothèque AFRILANG `std/c/simbirth` (niveau complex, catégorie complex). Elle expose 8 fonction(s) :
birtSum, birtMea

```
`import "std/c/simbirth" . `use simbirth`
```

- `birtSum(v list number) ? number`
- `birtMean(v list number) ? number`
- `birtMin(v list number) ? number`
- `birtMax(v list number) ? number`
- `birtVar(v list number) ? number`
- `birtStd(v list number) ? number`
- `birtNorm(v list number) ? list number`
- `simulate(steps number, seed number) ? list number`

Category: complex | Tier: complex | Functions: 8

FRANCAIS

1. Vue d'ensemble

Bibliothèque AFRILANG `std/c/simbirth` (niveau complex, catégorie complex). Elle expose 8 fonction(s) : birtSum, birtMea

```
`import "std/c/simbirth" . `use simbirth`  
- `birtSum(v list number) ? number`  
- `birtMean(v list number) ? number`  
- `birtMin(v list number) ? number`  
- `birtMax(v list number) ? number`  
- `birtVar(v list number) ? number`  
- `birtStd(v list number) ? number`  
- `birtNorm(v list number) ? list number`  
- `simulate(steps number, seed number) ? list number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/simbirth"  
use simbirth
```

Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés ? graphes, NLP, réseaux complexes.

3. Référence API

```
? birtSum(v list number) ? number  
? birtMean(v list number) ? number  
? birtMin(v list number) ? number  
? birtMax(v list number) ? number  
? birtVar(v list number) ? number  
? birtStd(v list number) ? number  
? birtNorm(v list number) ? list  
? simulate(steps number, seed number) ? list
```

4. Exemples d'utilisation

```
import "std/c/simbirth"  
use simbirth  
  
create result = birtSum(/* args */)   
say result  
  
create result = birtMean(/* args */)   
say result  
  
create result = birtMin(/* args */)   
say result  
  
create result = birtMax(/* args */)   
say result  
  
create result = birtVar(/* args */)   
say result  
  
create result = birtStd(/* args */)   
say result
```

5. Bonnes pratiques

? Préférez `import "std/c/simbirth"` en tête de fichier.
? Lancez `afrilang check` avant de livrer.
? Combinez avec les modules stdlib de la même catégorie.
? Voir /stdlib/ pour le source live et les démos playground.
? Signalez les problèmes sur GitHub si une export manque.

6. Annexe ? source

```
module simbirth
function birtSum(v list number) returns number
end
function birtMean(v list number) returns number
end
function birtMin(v list number) returns number
end
function birtMax(v list number) returns number
end
function birtVar(v list number) returns number
end
function birtStd(v list number) returns number
end
function birtNorm(v list number) returns list number
end
function simulate(steps number, seed number) returns list number
end
end
```

ENGLISH

1. Overview

AFRILANG library `std/c/simbirth` (tier complex, category complex). Exports 8 function(s): birtSum, birtMean, birtMin, b

```
`import "std/c/simbirth" . `use simbirth`  
- `birtSum(v list number) ? number`  
- `birtMean(v list number) ? number`  
- `birtMin(v list number) ? number`  
- `birtMax(v list number) ? number`  
- `birtVar(v list number) ? number`  
- `birtStd(v list number) ? number`  
- `birtNorm(v list number) ? list number`  
- `simulate(steps number, seed number) ? list number`
```

2. Installation & import

Add the module to your program:

```
import "std/c/simbirth"  
use simbirth
```

Tier: complex · Category: Complex modules (c/)
Advanced domains ? graphs, NLP, complex networks.

3. API reference

```
? birtSum(v list number) ? number  
? birtMean(v list number) ? number  
? birtMin(v list number) ? number  
? birtMax(v list number) ? number  
? birtVar(v list number) ? number  
? birtStd(v list number) ? number  
? birtNorm(v list number) ? list  
? simulate(steps number, seed number) ? list
```

4. Usage examples

```
import "std/c/simbirth"  
use simbirth  
  
create result = birtSum(/* args */)   
say result  
  
create result = birtMean(/* args */)   
say result  
  
create result = birtMin(/* args */)   
say result  
  
create result = birtMax(/* args */)   
say result  
  
create result = birtVar(/* args */)   
say result  
  
create result = birtStd(/* args */)   
say result
```

5. Best practices

```
? Prefer `import "std/c/simbirth" ` at the top of your file.  
? Run `afrilang check` before shipping.  
? Combine with related stdlib modules from the same category.  
? See /stdlib/ for the live source and playground demos.  
? Report issues on GitHub if an export is missing or undocumented.
```

6. Appendix ? source

```
module simbirth
function birtSum(v list number) returns number
end
function birtMean(v list number) returns number
end
function birtMin(v list number) returns number
end
function birtMax(v list number) returns number
end
function birtVar(v list number) returns number
end
function birtStd(v list number) returns number
end
function birtNorm(v list number) returns list number
end
function simulate(steps number, seed number) returns list number
end
end
```
